

FEATURES & BENEFITS

About Galaxkey

Galaxkey is a global leader in sustainable cloud-based data protection solutions. Using a single, easy to use and manage platform, Galaxkey provides broad data protection and compliance functionality for any organisation. Our data-centric solutions combine innovative technologies, encryption and policy to enable organisations to own, control and protect their data on their terms: any data, any place, any time!

Data protection that stands out from the rest

Galaxkey offers a unique set of features and benefits that ensure our data protection solutions stand out from that of our competitors. Since Galaxkey is a living product, it is designed to evolve. With continuous innovation, we are always developing advanced technologies and features that offer our customers the highest level of data protection and compliance. Staying abreast of changing threat vectors and legislation, keeping our customers and their data protected now and into the future.

Why choose Galaxkey

One comprehensive data protection platform, no intermediate hardware or software required

With Galaxkey you only need one tool and one set of keys for all your data protection requirements. It's like having a keyring where the technology knows which key to use. Our solutions protect data end-to-end: any type, on any platform and on any device without the requirement for additional encryption tools.

Demonstrate a proactive approach to data security, add value and increase your sales

Whilst using Galaxkey you improve customer and client confidence and emphasise your professionalism. Taking a proactive approach to data protection demonstrates that you take the security of your customers and their data very seriously. There is a reduced risk of data theft and breach of their personal information. As Galaxkey accounts are free for your customers to use, you are able to add value as well as provide peace of mind through secure collaboration with them.

Quality product, unrivalled customer and technical support

We pride ourselves on our quality product and our unrivalled customer and technical service and support. Data security and support go hand in hand. When using Galaxkey we have SLAs, support contracts and excellent response times with a proven track record to help you solve your data protection challenge when needed.

FEATURES & BENEFITS

Complete end-to-end security

Galaxkey provides complete end-to-end security for emails and documents, in transit and in store. Once this data is secured at the source device (machine or mobile), the data is restored only at the destination or the recipient's device. No intermediate server or software is needed. No backdoors exist! Galaxkey does not store any passwords in any form.

Support for corporates & individuals

The only system in the market that supports both corporate and individual account types with seamless integration.

Data-centric solution

Our solution protects the data itself so that you can secure and control your data wherever it travels: any data, any place and any time.

Quick deployment & easy operation

Takes minutes to deploy within a corporate environment and with a click of a button, anyone can easily protect data. Galaxkey works transparently in the background to relieve the organisation and user of any key management complexities.

Multi-platform support

Galaxkey integrates easily with existing email clients, providing one-click security for end-users to share information securely straight from Outlook, iOS, Android and Windows. Equally effective on all platforms and devices.

Single identity

Each user has a single unique identity that works across multiple devices and clients. Allowing you to manage all your email addresses under one umbrella.

Encryption standards

Galaxkey uses AES FIPS 140-2 compliant encryption security modules which is the US government standard that defines a minimum set of the security requirements for products that implement cryptography. It is designed for cryptographic modules that are used to secure sensitive information. The system uses 2048-bit RSA Keys as a standard and the chipers can be substituted if required.

Automated invitations

Galaxkey has an innovative and simple invitation module allowing any user to invite their customers or friends to use Galaxkey free of cost. Any device can be used to send secure emails or document to new recipients making the invitation process efficient and simple.

Notifications

A digital notification can be sent to the user (sender) when the secured email is opened and viewed by the recipient. This provides proof of delivery to the intended recipient. It is the equivalent of sending physical mail via recorded delivery.

In-house key management

Manage your keys in-house, within your chosen environment.

Mobile and web access

No need to install the Galaxkey client.

Secure share

Securely share files quickly and efficiently with multiple users simultaneously.

Secure vault

Define a folder for automatic encryption and configure for cloud services like Dropbox and Google Drive.

Revoke emails

Mail Revocation is the ability to revoke access to secured emails that have been sent. If an email is sent in error or to the incorrect recipient (for example) the user is able to revoke access to that email making it inaccessible to the recipient.

Set emails to time-out

Mail time-out allows users to implement time limits for accessibility to the secured emails. Once the time lapses, the email becomes inaccessible. Helping to enforce retention policies that are important for data protection compliance (like the GDPR).

Policy management

Set rules and policies to protect your data and meet specific compliance requirements.

Classification

Proactively mark data and documents.

Geofence

Confine your data to an area of choice using a virtual perimeter. Keep data within a network, a local area, a cloud of choice or geographic location of choice. Your data is always available and access properly managed.

AD integration

Integrates with Active Directory.

Flexible solutions

Galaxkey works in all environments: on-premise, cloud and hybrid solutions exist so that you can continue to work as you choose.

Administrative granular control

Galaxkey provides a perfect solution for administrators to manage their keys and control their data.

Document security

Secure documents, any type and any size.

Digital document signing

This function enables users to digitally sign documents for non-repudiation.

Digital email signing

This is an anti-spoof feature that ensures data integrity and non-repudiation. A digitally signed email provides the assurance that the data has not been tampered with. Furthermore, the recipient knows exactly where the email has come from.

Secure collaboration

Collaborate securely via a centralised and managed data protection platform. Fence your data, control data flow and manage access to it.

Gateway security

Apply rules and policies to automatically encrypt data entering and leaving your network.

Unauthorised data distribution

Restrict data flow with digital rights management

HSM integration

Galaxkey integrates with leading global Hardware Security Modules for secure storage of keys.

GDPR ready

Secure personally and commercially sensitive data with Galaxkey GDPR specific functions, whilst staying in control of your data.
